5 Courses

Introduction to Object-Oriented Programming in C++

C++ Programming: Classes and Data

Object-Oriented Programming in C++: Functions

Working with Objects in C++

Use C++ to build a Crypto Trading Platform: Final System

Apr 30, 2026

Patel Om

has successfully completed the online Specialization

Object Oriented Programming

In this 5-course specialisation, you will develop various C++ programming skills. Rather than building many small programs as you will in other courses, we have taken a different approach: you will create a single, extensive program through the five courses. The program will be a simplified cryptocurrency exchange platform. We will cover the following learning objectives: Use control flow to build interactive, multi-branched, iterated programs Select appropriate data types to model the trading platform's information Convert algorithms from pseudo-code to C++ and test them Use classes to combine data and functions and to model interactions between different parts of a program Understand how to construct an extensive program from multiple modules

Matthew Yee-King BSc MSc DPhil
Professor of Computer Science
Goldsmiths, University of London

This certificate attests to the learner's completion of an online program delivered via Coursera. It does not constitute formal enrollment at any university or entity and does not itself grant academic credit, grades, or a degree. Institutions or organizations may, at their discretion, recognize this learning toward their own programs or credentials.
